

COVERT MIRROR CAMERA

The covert mirror camera is a special reflective covering giving the impression that it is a traditional mirror positioned for security purposes in areas where it would normally be seen to provide additional views for security, and act as a deterrent to criminal activity. This product is built into the general security mirror provided to business and security outlets to ensure compatibility and consistency to existing mirrors fitted in that environment. It is a hard wired unit and does not contain any DVR recorder.

It is in use with major financial institutions and deployed in areas where high levels of security are required and is the preferred option without displaying a traditional wall mounted CCTV camera and compromising the gathering of vital intelligence.

Highly suitable for Banks, Post Offices, retail outlets, trade counters, Airports, Police Stations, Hospitals, and Prisons. It has an adjustable viewing angle of 80 degrees providing total covert flexibility.

It uses the most proven and effective SONY 1/3" Super HAD CCD colour sensor, providing 420 TV lines resolution. The camera cannot be seen by the human eye, but it is able to see through the reflective mirror covering clearly.

TECHNICAL SPECIFICATIONS

SONY SUPER HAD CCD CAMERA CHARACTERISTICS USED

Image Device :	1/3" SONY Super HAD CCD
Gamma Correction :	0.45
Lens:	3.6mm
Resolution:	420 TVL
Angle View:	80° (adjustable)
Sensitivity:	0.2 Lux light level
Voltage Supply:	12V DC (Max)
Voltage Supply:	9V DC
Voltage Supply :	9V DC (Min)
Power Consumption:	100 mA
RoHS Compliant:	Yes
Pixels:	500(H) x 582 (V)
Electronic Shutter:	1/50 -100,000 sec
Scan System:	625 lines 2.1 Interlace
